THE BITING OF MAN BY SQUIRREL FLEAS.

[By Passed Asst. Surg. George W. McCoy.]

The finding of several plague-infected ground squirrels in California, together with the belief that it is possible for man to be infected with plague from squirrels, has prompted the following experiments to determine whether fleas from these rodents would bite man under experimental conditions.

In the experiments the common California ground squirrel (*Citellus beecheyi*) the species in which plague infection has been found, was etherized in a mouse jar and the fleas were collected and identified. The fleas were then placed in large test tubes, 4 to 6 fleas in each tube. To feed them the tube was inverted over the forearm of a healthy man.

For the first experiment 30 fleas (*Ceratophyllus acutus*), the majority of which were females, were applied one hour after they had been removed from their natural host; only 2 fed. Twenty-four hours later but 1 fed. On the third day 4 of the 8 living fleas in 3 of the tubes fed well. On the sixth day only 12 of the 30 fleas were alive; 9 of these fed.

In the second experiment 5 female fleas (*Ceratophyllus acutus*) were applied to the arm 4 days after they had been taken from the squirrel; none fed. Seven days later, 11 days after being collected, 1 flea was alive, and it fed vigorously.

In the third experiment 4 female specimens of *Hoplopyllus anomalus* were taken from a squirrel. All of these fed well on the fourth day after they were collected.

The reaction at the site of the feeding was much more marked than after the bite of the human flea, *Pulex irritans*. A red papule associated with marked itching appeared at the point of each puncture. Traces of the lesion remained for several weeks and itching persisted for 10 days.

These experiments prove that the common fleas of the ground squirrels in the vicinity of San Francisco will bite man under the experimental conditions noted. Whether man is actually infected from squirrels through their fleas is a matter that remains to be determined. The Indian Plague Commission believed that infection from the rat flea was probably through dejecta from the flea. In our experiments it was noted that even during the most prolonged feeding the fleas never ejected blood or feces from the anus.

Further relative to plague-infected rat found at Oakland—Sanitary measures adopted.

Doctor Blue further reports, November 18:

On the finding of a plague rat in Webster street, Oakland [see Public Health Reports, November 13, 1908, page 1640] the block and vicinity were inspected and conditions were found to be very insanitary. In all, 3 plague rats and 1 human case of plague have been found near this locality in Chinatown. The human case occurred November 3, 1907, in Fourth street. The plague-infected rats were found as follows:

Third street	February 20, 1908
Third street	February 29, 1908
Webster street	October 30, 1908

On request the city health officer of Oakland employed 3 laborers to work under service inspector. The work was done with a view to finding out how far the plague infection extended. The floors of many insanitary stables, warehouses, and dwellings were taken up and a search was made. Many old rats cadavers and evidence that a large rat population existed were found. A thorough inspection service of that portion of Oakland will be maintained and Chinatown thoroughly cleaned.

Report from Los Angeles, Cal.—Examination of rodents for plague infection.

Passed Assistant Surgeon Stimson, Plague Laboratory, reports, November 13:

Animals examined in the laboratory from November 2 to 8, inclusive:

Ground squirrels	193
Gray rats	209
Black rats	9
Gophers	21

None of these animals were found to be infected with plague.

Report from Seattle, Wash.—Plague-prevention work.

Passed Assistant Surgeon Glover reports, November 16:

Vessels fumigated	3

Report from Van Buren, Me.—Inspection for smallpox on Canadian border.

Acting Assistant Surgeon Hammond reports, November 14:

During the week ended November 14, 12 cases of smallpox have been under supervision along the Maine-Canadian border. Two houses are quarantined in Van Buren, 1 in Madawaska, 1 in Frenchville, 1 in St. Agatha, and 2 in Grand Isle. Seventeen persons have been vaccinated. Thirty-eight persons have been inspected, of which number 17 passed and 21 were rejected. Eight pieces of baggage were disinfected.
